EDUCATION

The George Washington University **Sep 2021 – May 2027**

Ph.D., Transportation Engineering (AI, Robotics and AVs) *GPA: 3.9/4*

Dissertation: Tactical and Operational Utility-Based Decision-Making Modeling: from Heterogeneous Surface Traffic to Urban Air Mobility, Advisor: Samer Hamdar

Sharif University of Technology **Sep 2016 – Feb 2021**

B.Sc., Transportation Engineering *GPA: 3.8/4*

RESEARCH EXPERIENCE

University of Illinois Urbana-Champaign **Urbana, IL**

Research Intern *May 2026 – Aug 2026*

- Worked with Prof. Talebpour on developing advanced approaches including foundation models, vision-language architectures, diffusion models, imitation learning, and reinforcement learning, leveraging large-scale driving data.

The George Washington University **Washington, DC**

Graduate Researcher *Sep 2021 – Dec 2026*

- Developed multi-agent reinforcement learning (MARL) frameworks for AV coordination and negotiation in dynamic partially observable environments using CTDE framework with multi-agent PPO actor-critic models. Applied Bayesian optimization and genetic algorithms for the models' calibration.
- Led creation of an integrated simulation-AI pipeline combining SUMO, CARLA, and Python APIs for closed-loop decision-making experiments using real-time data (trajectory) streaming using twelve 5G-connected cameras.

Federal Highway Administration (Turner Fairbank Research Center, Saxton Lab) **McLean, VA**

Lead Researcher, Next Generation Modeling for CAVs (Grant ID: 693JJ324C000004) *Feb 2024 – Present*

- Leading development of trajectory generation models for ADAS (using physics-based, DL-based and RL-based frameworks), and integrating AV behavior models into large-scale microsimulation (SUMO) tools, in collaboration with UIUC and Northwestern University.

Research Assistant, Automated Vehicles for All (Grant ID: 693JJ319NF00001) *Sep 2023 – Aug 2024*

- Developed and validated perception (sensor fusion, detection, segmentation) and planning (map generalization, localization) algorithms using LiDAR, radar, and video data for enhanced AV situational awareness and mixed-traffic simulation, in collaboration with Texas A&M, UIUC, UC Davis, NVIDIA and GM.

Research Assistant, Third Generation Simulation (TGSIM) Data (Grant ID: 693JJ321C000001) *Sep 2021 – Jul 2023*

- Developed computer vision pipelines to collect large-scale trajectory data (11,000+ vehicle-kilometers) for AV–human interactions, enabling trajectory extraction and motion prediction for AV research.

TEACHING EXPERIENCE

The George Washington University

Lecturer / TA for CE 1010 (CRN:52745) Intro to Civil Engineering *Fall 2026*

- Delivered introductory lectures on civil engineering disciplines, transportation systems, and engineering problem-solving; led lab/recitation sessions and graded assignments for first-year engineering students.

Lecturer / TA for SEAS 1001 (CRN:55178) Engineering Orientation *Fall 2026*

- Led orientation lectures and discussion sessions introducing SEAS majors, academic pathways, and professional practices; mentored first-year students on course planning and research/career opportunities.

TA for CN:6730 Sustainable Urban Planning *Spring 2024, Spring 2025, Fall 2025*

- Supported classroom instruction by developing learning materials, organizing project workflows, and contributing to course content; advised students during office hours and project reviews on research methods.

TA for CN:4721 Traffic Engineering *Spring 2025*

- Delivered in-person instructional support, including preparing lecture examples, drafting problem sets, coordinating exams, and helping shape course modules related to traffic operations and roadway analysis.

RESEARCH INTERESTS

My research interests focus on traffic flow theory, behavior modeling, CAVs, simulation, machine learning, and computer vision to enhance safety, efficiency, and resilience in transportation systems:

- **Machine Learning and Artificial Intelligence:** Developing deep reinforcement learning architectures, including multi-agent reinforcement learning, foundation models, vision-language models, diffusion models, and imitation learning for autonomous driving applications.
- **Automated Driving Systems (ADS) and Trajectory Planning:** Designing perception, prediction, and planning pipelines for autonomous vehicles using multi-sensor fusion. Focus areas include generating trajectory models for ADAS and enhancing situational awareness in mixed-traffic environments.
- **Traffic Flow Theory and Traffic Simulation:** Macroscopic and microscopic traffic flow analysis, integrating data-driven and physics-based behavior models into large-scale microsimulation tools. Building integrated simulation pipelines for closed-loop decision-making using real-time data streaming.
- **Computer Vision and Large-Scale Data Modeling:** Engineering computer vision pipelines to extract large-scale trajectory data for AV-human interaction modeling and motion prediction. Utilizing multi-modal deep learning time-series models to monitor driver behavior and deploy real-time IoT alerts.
- **Transportation Operations and Safety Optimization:** Applying Bayesian optimization, genetic algorithms, and reinforcement learning to calibrate traffic models and evaluate vulnerable road user behavior. Analyzing the impact of V2X connectivity on intersection performance and overall network reliability.

PROPOSAL WRITING EXPERIENCE

U.S. Department of Transportation

FHWA Exploratory Advanced Research (EAR) Program, Solicitation No. 693JJ3-24-BAA-0001

- Title: New Generation Models for Connected Autonomous Vehicles: NGM-CAV
- Proposer: The George Washington University (Lead), Northwestern University (Subcontractor), University of Illinois Urbana-Champaign (Subcontractor)
- Status: Awarded
- Budget: $432,717 for the project and $344,881 allocated to The George Washington University
- Announcement and Synopsis: https://www.highergov.com/contract/693JJ324C000004/

INDUSTRY EXPERIENCE

Mead&Hunt **May - Aug 2025**

Advanced Mobility Intern *Washington, DC*

- Assisted the lead engineer in citywide traffic signal optimization and timing plan implementation for DDOT and BCDOT, utilizing Synchro, and signal controller data to enhance corridor coordination and reduce travel times.
- Supported development of traffic simulation and forecasting models for smart mobility and corridor planning projects with WVDOT.

moment.ai **Sep - Dec 2024**

Autonomous Vehicle Researcher Intern *Washington, DC*

- Developed multi-modal deep learning time-series models (LSTM/GRU) integrating smartphone and AV sensor data to detect driver behavior and health incident risks, outperforming traditional methods by 9%.
- Developed a real-time NVIDIA Jetson/mobile driver monitoring system using AWS IoT pipelines and Alexa integration for in-vehicle alerts and control.

Arcadis **May - Aug 2024**

Transportation Engineer Intern *Atlanta, GA*

- Collaborated with GDOT on concept design, traffic volume and capacity analysis, operational analysis, and the development of a mitigation plan for the I-285 Express Lanes in Atlanta.
- Conducted meetings with stakeholders, writing reports, and assisting in the preparation of presentations for project reviews and approvals.

HONORS AND AWARDS

COMTO DC Scholarship 2026
ITE CAPSITE Pat Timbrook Scholarship 2025
ITS Maryland Student Scholarship 2025
FGSS and SEAS Tuition Award, The George Washington University

TECHNICAL SKILLS

Programming: Python, ROS, MySQL, Git
Libraries: PyTorch, Diffusers, Transformers,OpenCV, RLlib, Gymnasium, Scikit-learn, Keras, Ultralytics
Tools: CARLA, Unity, Power BI, MicroStation, Tableau, SUMO, VISSIM, Synchro, SIDRA
